9/29/2014	1	King County Flood Control District	Passed as Amended	Pass

A RESOLUTION adopting [Provisional](#) Level of Protection [Goals](#) for the Green River System-Wide Improvement Framework.

WHEREAS, in the Spring of 2013, the King County Flood Control Zone District ("District"), in cooperation with numerous partners, commenced preparation of the Green River System-Wide Improvement Framework ("SWIF") to protect the Green River Valley's economic base from flooding, while strengthening the resiliency of its natural systems; and

WHEREAS, the SWIF will provide for management of the Green River Valley in a manner that meets multiple and often competing federal, state and local mandates associated with endangered species recovery, flood protection, clean water standards and economic health; and

WHEREAS, the SWIF will include a collective vision across diverse partners regarding flood protection goals and long-term actions that are necessary to achieve this vision; and

WHEREAS, the SWIF planning process is anticipated to be completed in February 2015; and

WHEREAS, the major elements of the SWIF planning process are (1) to establish and involve a stakeholder committee, (2) to conduct public outreach, (3) to determine goals, objectives, vision and strategy, (4) to evaluate flood risks and level of protection alternatives, (5) to assess habitat restoration opportunities and vegetation management alternatives, and (6) to develop capital projects and a financing plan for them; and

WHEREAS, District approval of the SWIF will allow the District to remain eligible for capital project funding under PL 84-99; and

WHEREAS, as part of the SWIF planning process, five technical memoranda have been issued: (1) Aquatic, Floodplain and Riparian Vegetation and Habitat Assessment, (2) Geomorphology Assessment, (3) Geotechnical Assessment, (4) Hydraulic Assessment and (5) Economic Analysis; and

WHEREAS, as part of the planning process, a Current Conditions Report has been issued, a portion of which is called a Vegetation and Habitat Resources Technical Memorandum; and

WHEREAS, among other things, the planning process so far has revealed that (1) levee overtopping that exceeds design protection will result in floodplain inundation of 1 to 10 feet or more; (2) system-wide annual damages due to flooding are estimated to be \$47.1 million (per HEC-FDA modeling); (3) present value damages due to flooding are estimated to be \$1.1 billion (based on fifty years and 3.5 percent discount rate); and (4) 5,371 residential structures are estimated to be located in the SWIF planning area; and

WHEREAS, nine provisional Level of Protection (“LOP”) Study ‘B’ areas have been evaluated to assess the effects of achieving a maximum LOP of 18,800 cfs; and

WHEREAS, LOP goals do not equate to the future alignment of flood protection facilities; and

WHEREAS, the alignment of flood facilities will be identified through subsequent SWIF phases; and

WHEREAS, the Board of Supervisors of the District desires to approve LOP goals for the SWIF; now, therefore

BE IT RESOLVED BY THE BOARD OF SUPERVISORS OF THE KING COUNTY FLOOD CONTROL ZONE DISTRICT:

SECTION 1. The board of supervisors of the King County Flood Control Zone District approves provisional level of protection ("LOP") flooding goals for the Lower Green River portion of the Green River System-Wide Improvement Framework, as shown on Attachment A to this resolution.
