Seattle, WA 98104

## Signature Report

### Ordinance 19352

**Proposed No.** 2021-0382.1

**Sponsors** Kohl-Welles

1 AN ORDINANCE to adopt the King County department of local  
 2 services, road services division, annual six-year (2022 - 2027)  
 3 capital improvement program in accordance with K.C.C.  
 4 4A.100.030, to serve as the county's adopted 2022 annual road  
 5 plan in accordance with RCW 36.81.130 and to serve as the  
 6 county's adopted comprehensive transportation program in  
 7 accordance with RCW 36.81.121.

8 **STATEMENT OF FACTS:**

9 1. K.C.C. 4A.100.010 requires King County adopt a biennial budget for  
 10 such county funds as the council may determine and conduct a  
 11 midbiennium review and modification for the second year of the  
 12 biennium.

13 2. K.C.C. 4A.100.0130 requires each county agency to include its capital  
 14 projects in a six-year capital improvement program ("CIP") for the fiscal  
 15 period and the next fiscal periods.

16 3. In conjunction with the 2021-2022 biennial budget process, the road  
 17 services division of the department of local services prepared and the  
 18 council adopted the road services division's six-year CIP for 2021-2026.

19 4. RCW 36.81.121 requires that before the adoption of a roads division  
 20 budget, the council must adopt a comprehensive transportation program

Ordinance 19352

---

21 for the next ensuing six calendar years. The purpose of the statute is to  
22 ensure that each county shall perpetually have available advanced plans  
23 looking to the future for not less than six years as a guide in carrying out a  
24 coordinated transportation plan.

25 5. RCW 36.81.130 requires the council to adopt an annual road plan. Any  
26 appropriations contained in a county road budget are void if the county's  
27 annual road plan is not adopted before such appropriations.

28 6. The proposed roads six-year CIP for 2022-2027 incorporates the  
29 executive's proposed amendments to the roads division capital budget  
30 included in the second omnibus supplemental.

31 7. Attachment A to this ordinance is the roads division six-year CIP for  
32 2022-2027.

33 **BE IT ORDAINED BY THE COUNCIL OF KING COUNTY:**

34 SECTION 1. The King County Road Services Division 2022-2027 Capital  
35 Improvement Program, which is Attachment A to this ordinance, shall serve as the  
36 county's comprehensive transportation program for the period of 2022 through 2027.

37 SECTION 2. The planned expenditures for those projects in fiscal year 2022 as  
38 reflected in the King County Road Services Division 2022-2027 Capital Improvement  
39 Program, which is Attachment A to this ordinance, shall serve as the county's final road  
40 plan for fiscal year 2022.

Ordinance 19352

---

- 41            SECTION 3. The road services division 2022-2027 Capital Improvement  
42 Program, which is Attachment A to this ordinance, is hereby approved.

Ordinance 19352 was introduced on 10/12/2021 and passed by the Metropolitan King County Council on 11/2/2021, by the following vote:

Yes: 9 - Ms. Balducci, Mr. Dembowski, Mr. Dunn, Ms. Kohl-Welles,  
Ms. Lambert, Mr. McDermott, Mr. Upthegrove, Mr. von Reichbauer  
and Mr. Zahilay

<b>Annual Revenue Total</b>	<b>28,865,360</b>	<b>1,850,209</b>	<b>(534,096)</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>(534,096)</b>	

**Scope**

A comprehensive program of replacement and preservation of roadway drainage systems and associated roadway features in compliance with current codes and standards.

**Justification**

This program identifies, prioritizes, and improves roadway drainage infrastructure related to surface water, groundwater, and stormwater runoff. Damage or failure of the roadway due to flooding, saturation, erosion, or subsidence can be expected without improvements. Additionally failed drainage systems can cause severe private property damage as water tries to move downstream around a failed roadway system.

**Scope**

This project provides funding for existing projects that experience unforeseen circumstances such as accelerations or delays.

**Justification**

This project allows Roads flexibility with project implementation. It is to cover costs for unforeseen circumstances and developments not anticipated at the time of budget adoption. If Roads did not have the flexibility of this project to expediently transfer appropriation, the ability of the division to proactively manage projects would be limited.

**Scope** This project allows Roads to respond to emerging needs of the public and the roadway system. The Quick Response countywide project supplies funds for sub-projects that require immediate attention, including emergency repairs associated with storm damage or other infrastructure deterioration or damage, unanticipated pedestrian or vehicle needs, or other emerging issues.

**Justification** Given the current financial situation and the accelerating rate of decline of the condition of the system, Roads by necessity is becoming a more reactive rather than proactive agency. The Quick Response countywide project will supply funds for sub-projects that arise during the year that require immediate attention. Projects can include emergency repairs associated with storm damage or other infrastructure deterioration or damage, unanticipated pedestrian or vehicle safety needs, or other emerging issues.

**Scope**

This program preserves roadway infrastructure by applying cost-effective resurfacing and rehabilitation treatments to extend the life of existing roadways.

**Justification**

Two of the goals in the 2014 Strategic Plan for Road Services are to address safety concerns, and to preserve the existing roadway network. This program serves these goals by applying preservation treatments that improve roadways' functional performance and that address their physical deterioration. Applying the most cost-effective treatment at the right time extends a roadway's useful life. With more than 1 million trips per day serving residents, connecting incorporated areas, and moving freight, the county road system is a critical component of the regional economy. As such, preserving its overall condition and functionality aligns with the County Executive's priority of Regional Mobility. If these treatments are not applied, repercussions may include -- but are not limited to -- higher lifecycle costs and user delays.

**Scope** This program funds the replacement and preservation of aging drainage systems and other associated infrastructure in compliance with current codes and standards. Projects may include new infrastructure; repairs of failing systems, ditches and shoulder (which help water to properly drain off roads); or other drainage features.

**Justification** This program provides critical drainage preservation work addressing safety concerns, protecting the roads from failure, meets regulatory requirements and promotes improved water quality.

Two of the goals in the 2014 Strategic Plan for Road Services are to address safety concerns, and to preserve and maintain the existing roadway network. This program will protect road users, and improve and maintain the roadway structure by eliminating failed or failing drainage systems, restoring structural capacity, and preventing water damage to public and private properties.

Drainage preservation is a critical risk management program for the Road Services Division due to its funding limitations. Even one season of not maintaining the drainage system can result in the loss of many links in the roadway network. Water that is not managed immediately can damage or destroy roads. During the February 2020 flood, Roads had over \$10 million in damage at 46 locations, and at one point in time, there were over 30 roads closed which greatly impacted local and regional mobility. Standing water and ponding is a major safety hazard to road users. Failing drainage infrastructure can result in collapsed roadways, landslides, flooding, property damage and associated risks to life safety.

Another goal of the strategic plan is to meet regulatory requirements or standards. The program's work is regulated by federal statutes, state laws and regulations, and King County Code.

**Scope** The project identifies and prioritizes existing guardrail to be refurbished or upgraded to current standards. Program work includes installing reflectors on guardrail according to federal standards, upgrading or installing end terminals, and raising guardrail to current standard regulated height.

**Justification** The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This program will improve the safety of the system by upgrading existing guardrail and guardrail end terminals. This includes identifying and replacing existing end terminals that are missing or do not meet current standards. This project will also install guideposts on the guardrail according to federal standards. Other work includes raising guardrail to current standard height recommended by Washington State Department of Transportation Design Standards. Upgrading existing guardrail and guardrail end terminals will make the road safer and may lessen the severity of crashes.

**Scope** This project funds high priority preservation and maintenance projects to keep the aging bridge inventory serviceable and safe for the traveling public. Project activities may include load upgrades, scour mitigation, re-decking, bridge rail repairs or retrofits, superstructure and substructure repairs, painting, etc.

**Justification** Two of the goals in the 2014 Strategic Plan for Road Services are to address safety concerns, and to preserve and maintain the existing roadway network. With limited revenues and many unfunded transportation needs in King County, emphasis is placed on keeping the existing bridge infrastructure serviceable and safe for the traveling public. Regular federally mandated routine inspections identify repairs for the bridges. These repairs are prioritized based on: structural safety, traffic safety and the potential to reduce frequent maintenance. These repairs may include load upgrades, scour mitigation, redecking, bridge rail repairs or retrofits, superstructure and substructure repairs, painting, etc. Preserving the county's bridges will benefit mobility, aligning with the County Executive's priority of Regional Mobility. If bridge repairs and maintenance are deferred, these structures will deteriorate quicker, and reactive strategies such as imposing load restrictions or closing the bridge will need to be implemented.

**Scope** This program improves the safety of the roadway network by making improvements to reduce the rate of collisions on roads in unincorporated King County. Improvements include, but are not limited to, traffic control signals and signs, pavement markings, lighting and the installation of High Friction Surface Treatment (HFST) on roadways.

**Justification** The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This program will improve the safety of the system by identifying intersections and roadway sections with high crash rates and determine corrective measures to reduce the occurrence of collisions. In addition, this program also complies with federal and Washington State Department of Transportation requirements for local agencies to have a Local Road Safety Plan.

**Scope** This program improves the safety of students, pedestrians and others using roads near schools in unincorporated King County by implementing traffic calming measures as needed, including safety-related signs, marked crosswalks, radar activated speed signs, flashing beacons, or paved sidewalks or pathways.

**Justification** The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This multi-decade program implements a variety of traffic calming approaches to improve the safety of pedestrians and other users in school zones in unincorporated King County. These approaches include, but are not limited to, marked crosswalks, radar activated speed signs, flashing beacons, or paved sidewalks or pathways.

**Scope**

This project provides funding for existing projects that experience unforeseen circumstances such as delay, match for additional grant funding or required accelerations.

**Justification**

This project allows Roads flexibility with project implementation. It is to cover costs for unforeseen circumstances and developments not anticipated at the time of budget adoption. If Roads did not have the flexibility of this project to expediently transfer appropriation, the ability of the division to proactively manage projects would be limited.

**Scope**

To construct intersection improvements which could be either a roundabout or additional travel lanes with a traffic signal at the intersection of Issaquah Hobart Road SE and SE May Valley Road.

**Justification**

Issaquah-Hobart Road is a main route connecting Interstate 90 in the City of Issaquah to state Highway 18, and the communities of Hobart and Maple Valley. The road, which is named Front Street in Issaquah, is a heavily-used commuter route, with a northbound peak direction during the morning peak period and the reverse in the afternoon peak period. It has experienced a substantial amount of growth in traffic volumes over the last several years. As a result, congestion on the corridor has worsened, leading to extended travel times and longer peak traveling hours. The City of Issaquah and the Road Services Division partnered on the Issaquah-Hobart Road/ Front Street Corridor Study which evaluated and identified safety, mobility and other related improvements to provide the most efficient and reliable traffic flow possible along the corridor. The study, released in March 2018, recommended several projects to improve traffic flow, including the construction of a roundabout or additional travel lanes with a traffic signal at the intersection with May Valley Road.

**Scope**

This project constructs a sidewalk on the west side of Renton Avenue S between 68th Avenue S and S 112th Street, a paved walking surface on the east side of Renton Avenue between 68th Avenue S and S 116th Place, and bicycle lanes on each side of Renton Avenue within the project area.

**Justification**

This non-motorized project will improve the safety of pedestrians and other users in the Renton Avenue corridor and fills a gap in the sidewalk system in unincorporated King County. The project aligns with the County Executive's priorities of Equity and Social Justice, and Regional Mobility. The existing walking surface is not compliant with the Americans with Disabilities Act, and it varies from a grass or gravel shoulder to a 4-foot-wide uneven, overgrown asphalt walkway to a 6-foot wide paved shoulder. In addition, the existing bicycle lanes are less than 5 feet wide. This road section is a walk route for the Lakeridge and Campbell Hill elementary schools with a total student population of 915 and a 1 mile walk radius. The project area is within an Equity and Social Justice community.

**Revenue Sources**

33436 - WA ST DEPT TRANSPORTATION		5,250,000	(5,250,000)						(5,250,000)	
<b>Annual Revenue Total</b>	<b>0</b>	<b>5,250,000</b>	<b>(5,250,000)</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>(5,250,000)</b>	

**Scope** This project constructs a sidewalk and a bicycle lane on the west side of 8th Avenue SW from SW 102nd Street to SW 108th Street, a sidewalk and a bicycle lane on the north side of SW 102nd Place between 4th Avenue SW and 6th Avenue SW, a sidewalk on the east side of 6th Avenue SW from SW 102nd Street to just south of SW 100th Street, and a parking area on the west side of this area. In addition, the project installs beacons at pedestrian crossings and pathways surrounding Mount View Elementary, White Center Heights Elementary, and Cascade Middle schools and funds community outreach and education about the improvements.

**Justification** This non-motorized project will improve the safety of pedestrians and other users in the White Center community and fills a gap in the sidewalk system in unincorporated King County. The project aligns with the County Executive's priorities of Equity and Social Justice, and Regional Mobility. The existing walking surfaces along each section are not compliant with the Americans with Disabilities Act, ranging from one-half-foot of asphalt plus uneven gravel or grass shoulder to 6 feet of asphalt adjacent to the travel lanes. These roadways are identified by the Highline School District as a school walk route and provide access to elementary, middle and senior high schools within one mile. Collision data along the corridor and at these intersections justify these safety improvements. The route is used by those visiting a YWCA, a King County public library and a Seattle/King County Public Health Clinic located within one-half-mile of the project. The project area is within an equity and social justice community and abuts the King County Housing Authority, Greenbridge public and mixed-use housing development.

**Scope**

Design and construct a single lane elliptical roundabout.

**Justification**

This project will improve the safety of motorized and non-motorized users in south King County. This intersection was identified as a High Collision Location in King County's report in 2016. It is currently controlled by a two-way stop. However, northbound left turning traffic and eastbound left turning traffic must compete with heavy southbound traffic on Military Road during the afternoon commute.

From 2010 through 2019, the collision rate is 0.83 collisions per million entering vehicles and the intersection has a 5,000 ADT. The three-year collision rate from 2017 to 2019 is 1.48 collisions per million entering vehicles, indicating a significant rising collision trend and growing safety problems at the junction (a collision rate over .9 is considered a high collision location).

Roundabouts have been effective at reducing collision rates at intersections, and providing traffic calming for the local neighborhood.

**Scope**

To perform projects to address locations where recurring flood events have impacted or have the potential to impact local communities.

**Justification**

The King County Flood Control District is a special purpose government created to provide funding and policy oversight for flood protection projects and programs in King County. The District and the Road Services Division partnered together on identifying projects to address locations where recurring flood events have impacted or have the potential to impact local communities. Projects include flooded roadway mitigation and bridge scour projects.

**Scope**

To design and construct a roundabout on Redmond Ridge Drive NE at NE Alder Crest Drive, including curb, gutter and sidewalk.

**Justification**

Redmond Ridge Drive NE is a major arterial and runs north to south. It is located east of the City of Redmond, and intersects with NE Novelty Hill Road, which is also a major arterial.

This project will support the anticipated build-out of the Redmond Ridge Business Park and its associated economic benefits. Once the business park is developed to its projected capacity, vehicle delay at the intersection will significantly increase. The roundabout is intended to improve intersection level of service, and neighborhood pedestrian safety for area residents, including children traveling to the nearby park and planned middle school.

**Scope**

Evaluate five obsolete legacy Roads applications, determine the best option for replacing each (e.g., leverage existing County systems, buy or build), then implement the selected best option.

**Justification**

The obsolete systems in need of replacement are: 1) Capital Improvement Program (CIP) database; 2) Cultural Resources database; 3) BizDocs; 4) Roads Map Vault (RMV); 5) Scales database. They are built on old technology no longer supported by King County Information Technology (KCIT), making them difficult and expensive to support and increasing business risk. Further, they are not able to be integrated with other Roads or County systems, cannot leverage geospatial capabilities, and lack functionality needed by the business. The state of these applications results in decreased productivity and efficiency, requires manual processes, and causes staff to spend time detecting and correcting errors. There is also an ongoing risk of system failure and loss of business continuity.

**Scope**

Acquire land and construct a new, centrally located maintenance facility to serve northeastern King County, replacing the existing Cadman facility that is mislocated to meet current road maintenance needs. The Cadman facility is inside the City of Redmond in an urbanized area with significant development pressures on the horizon that are not compatible with long-term operation of a roads maintenance facility which needs to respond to incidents and emergencies 24 hours a day, seven days a week. Due to past annexations and incorporations, it is also at the far western edge of the remaining northeastern unincorporated area and not centrally located to meet the needs for timely and efficient service to a large, spread out rural service area. Long travel times from the current location to many portions of the service area can impede quick response to emergency events such as storms, flooding, earthquakes, and collisions. It also results in inefficiencies and higher costs for planned maintenance activities. This project would construct a new facility at a more centrally-located site in the rural area and include adequate space for crews, vehicles and multiple pieces of equipment, and materials storage and stockpiling, as well as functions such as waste disposal, truck washing and other similar activities.

**Justification**

**Scope** Complete buildout of the Preston maintenance facility. Development and occupation of the facility has been impacted and delayed by Washington state litigation on water rights. Construction costs to build out the facility have also been affected by an exceptionally active and competitive regional construction market for buildings/facilities, higher labor rates, and escalating material costs, and additional funding is required to complete the project. This phase of the project will include water system upgrades to allow full use and occupation of the facility, and completion of site development and buildings and other structures that support staff, equipment, materials and operations. Once the project is complete, additional functions can be moved from the existing Fall City facility to Preston. The Fall City location is comprised of failing facilities that are undersized, including an old barn without any heat or cooling that serves as a locker room. In addition, the site is impacted by flooding.

**Scope**

Increase the safety and condition of the road system and enhance fish passage by replacing culverts that are in poor or failing condition, or undersized, with new culverts designed to be fish passable.

**Justification**

This program supports the Road Services Division's drainage asset management need to replace culverts at end of their lifecycle and King County Executive Dow Constantine's Clean Water and Healthy Habitat initiative.

Culverts that are in poor condition or undersized pose a risk of failure that can result in collapse of the roadway, landslides, flooding, damage to public and private property, and associated risks to life safety. When culverts reach the end of their life cycle they need to be replaced with new infrastructure designed to current standards in order to mitigate risk and provide appropriate drainage functionality.

Culverts that are not designed to be fish passable block access to important upstream habitat necessary for the sustainability of fish species. Roads' proposed Culvert Replacement and Fish Passage projects are included in Executive Constantine's broader county fish passage program (led by the Water and Land Resources Division), which complements the county's collaboration with tribal governments and long-standing support for watershed-based salmon recovery efforts. The county initiated work with federal, state, and tribal officials to develop a fish passage program for watersheds. Originally conceived in late 2017, the program took on greater meaning following a June 2018 U.S. Supreme Court ruling that required the state of Washington to fix state-owned fish passage barriers within the Puget Sound area in order to avoid violating tribal treaty rights.

**Scope** To replace bridges affected by new federal requirements, or which have been prioritized for replacement to correct structural or functional deficiencies. These requirements may have resulted in restrictions on heavy vehicles, which pose public safety concerns if not promptly and systematically addressed. Seven bridges will be replaced in the 2019-2020 Bridge Safety program; S 277th Street Bridge #3126, Ames Lake Trestle Bridge #1320A, Baring Bridge #509A, Boise X Connection #3055A, Coal Creek Bridge #3035A, Fifteen Mile Creek Bridge #493C and Upper Tokul Creek Bridge #271B.

**Justification** Following a bridge collapse, and, more importantly, a recent decision by the Federal Highway Administration (FHWA) to allow heavier trucks on roads, the FHWA developed new calculations for determining the weight that a bridge can safely carry. King County owns and maintains 178 vehicular bridges, and, as mandated, is evaluating each of them using current bridge condition information and the new federal standards to calculate bridge weight carrying capacity between now and the federal deadline of 2022. So far, Road Services has evaluated 112 bridges and determined new vehicle weight restrictions are necessary for 23 bridges. One immediate impact from load limiting these bridges is that trucks will detour onto roads less appropriate for heavy truck traffic, for example, through residential areas or onto narrow, winding, or steep roads. Another concern is that emergency responders may be delayed if certain types of fire apparatus are unable to cross a bridge on the most direct route. There is also the risk that, despite the county's best efforts to enforce the weight restrictions, some overweight trucks will not comply with posted weight restrictions and cross bridges, resulting in structural damage, or even a potential bridge collapse. Structural damage from violations of the weight conditions could lead to unsafe conditions for travelers and/or the need to close bridges indefinitely to all traffic, resulting in significant consequences for communities and the transportation system. To reduce risks to public safety and regional mobility, it is imperative that the county initiate and continue a bridge replacement program.

**Scope** To replace Coal Creek Bridge #3035A which is structurally deficient, functionally obsolete, weight and speed restricted, and its steel members are at the end of its useful life.

**Justification** The bridge is located near the city of Black Diamond along SE Lake Walker Road at Coal Creek, about 1.5 miles southeast of Veazie-Cumberland Road SE. The bridge provides sole access to approximately 70 homes in the Walker Lake neighborhood and a Washington State Department of Fish and Wildlife public boat launch at the lake. SE Lake Walker Road is a county-designated snow and ice route.

Coal Creek Bridge #3035A is a highly ranked candidate for replacement using the bridge priority analysis adopted by the King County Council in 1994 (Ordinance 11693). It has been categorized as structurally deficient with a sufficiency rating of 11.68 out of a possible score of 100 (a bridge in new condition). The steel girders and floor beams of this bridge are over 100 years old; they were originally in place at another bridge location in 1912 and moved to this site in 1958 when Coal Creek Bridge was built. The steel floor beams are severely corroded, and other deficiencies include deteriorating creosote timber piles, rotten timber backwall planks and constricted hydraulic opening. The bridge's width, railings and alignment were designed and built to standards that are now outdated and inadequate for current needs.

In 2017, the bridge was posted with new vehicle weight restrictions. (The bridge was temporarily posted with weight restrictions in 2012, but the posting was removed after repairs were made to address the deficiencies.) The bridge is unable to support certain types of fire engines used by the adjacent fire districts. In addition, other service and delivery vehicles, such as typical full-size garbage trucks or concrete mixers, are too heavy to use the bridge. The weight restrictions were put into place after the Federal Highway Administration developed calculations for determining the weight that a bridge can safely carry. Federal, state and local governments – including King County – are required to evaluate publicly-owned vehicular bridges using these new criteria and formulas to determine whether additional weight restrictions must be placed on bridges under this new requirement.

**Scope**

To replace Ames Lake Trestle Bridge #1320A which is structurally deficient, functionally obsolete, weight restricted, and its timber substructure is at the end of its useful life.

**Justification**

Located west of rural Carnation, the bridge carries Ames Lake Carnation Road NE over Ames Creek, connecting NE Carnation Farm Road and West Snoqualmie Valley Road NE to NE Redmond Fall City Road. Ames Lake Carnation Road is a two-lane minor arterial roadway with a traffic volume of approximately 1,800 vehicles per day, including about 70 trucks per day. The timber trestle bridge serves agricultural and forest use parcels and single-family homes and is a designated county snow and ice route. The bridge was originally built in 1924, and the bridge deck was replaced in 2003.

**Scope** To replace Upper Tokul Bridge #271B which is beyond its useful life, functionally obsolete, weight restricted, and at risk of being closed due to foundation scour, its age and condition.

**Justification** Built in 1965, the timber bridge carries Tokul Road SE over Tokul Creek, just north of the City of Snoqualmie. It provides sole access for about 50 homes and one access point for logging operations. The bridge has a traffic volume of about 400 vehicles per day including about 40 trucks per day. It is a designated county snow and ice route.

Upper Tokul Bridge #271B is a highly ranked candidate for replacement using the bridge priority analysis adopted by the King County Council in 1994 (Ordinance 11693). It has been categorized as functionally obsolete with a sufficiency rating of 35.89 out of a possible score of 100 (a bridge in new condition). The bridge's width and railings were built to standards that are now outdated and inadequate for current needs. Upper Tokul Bridge has a constricted hydraulic opening and a foundation constructed of creosote timbers which can leach into the water and impact water quality, fish and wildlife. In addition, seasonal high flows on Tokul Creek cause scour under the footings at the intermediate piers.

In 2017, the bridge was posted with weight restrictions. The bridge is unable to support certain types of fire engines used by the adjacent fire districts, including water tenders used to transport water to areas without fire hydrants. In addition, other service and delivery vehicles, such as typical full-size garbage trucks or concrete mixers, are too heavy to use the bridge. The weight restrictions were put into place after the Federal Highway Administration developed calculations for determining the weight that a bridge can safely carry. Federal, state and local governments – including King County – are required to evaluate publicly-owned vehicular bridges using these new criteria and formulas to determine whether additional weight restrictions must be placed on bridges under this new requirement.

**Scope**

To replace Baring Bridge #509A which is structurally deficient, functionally obsolete, is severely weight restricted, and at risk of being closed due to its age and condition.

**Justification**

This bridge carries Index Creek Road over the South Fork Skykomish River near the Town of Skykomish and U.S. Route 2. It was originally built in 1930 and was designated as a King County Landmark Bridge by the Landmarks Commission in 1999, a state and national landmark in 2019, and is currently the only timber and cable suspension bridge in Washington State that still carries load-limited traffic. The bridge provides the only public access to a community of approximately 170 properties including more than 40 developed sites south of the South Fork Skykomish River.

Baring Bridge #509A is a highly ranked candidate for replacement using the bridge priority analysis adopted by the King County Council in 1994 (Ordinance 11693). It has been categorized as structurally deficient with a sufficiency rating of 12.94 out of a possible score of 100 (a bridge in new condition) and is functionally obsolete. The bridge is past its useful life, and requires frequent, major and costly repairs during which it is removed from service, cutting off access to the community on the south end of the bridge.

The bridge is a one-lane, two direction timber suspension bridge with a width of less than nine feet; it is posted for a weight limit of 10 tons and a speed limit of five miles per hour. It does not have adequate capacity to support fire engines used by the adjacent fire district as well as their water tenders used to transport water to areas without fire hydrants. In addition, most three-axle single-unit trucks are too heavy to use the structure.

In addition to the limited load capacity, other deficiencies include the narrow deck width, substandard rails, rotted timber caps, and scour issues.

**Scope**

To replace S 277th Street Bridge #3126 which is approaching the end of its useful life and is weight restricted.

**Justification**

This bridge was built in 1950 and its deck was widened in 1973. It carries S 277th Street over Mullen Slough, connecting Interstate 5 to State Route 167 near Auburn, Kent, and Federal Way. S 277th Street is a four-lane principal arterial roadway with a traffic volume of approximately 23,000 vehicles per day, including approximately 2,600 trucks per day and an estimated 4 to 10 million tons of freight per year. The bridge serves the surrounding urbanized areas, single family suburban homes in the North Federal Way and South Lake Fenwick Potential Annexation Areas, and adjacent farmland preservation agricultural parcels. It is a designated county snow and ice route, lifeline route, and Green River Valley flood evacuation route.

S 277th Street Bridge is a highly ranked candidate for replacement using the bridge priority analysis adopted by the King County Council in 1994 (Ordinance 11693). It has a sufficiency rating of 39.70 out of a possible score of 100 (a bridge in new condition). The 71-year-old timber sub-structure is approaching the end of its useful life, the narrow hydraulic opening is constricting the water flow, and the bridge abutments are constructed of creosote timber, which can leach into the water and impact water quality, fish and wildlife. It is not feasible to repair or rehabilitate the bridge to meet current standards for structural, geotechnical or hydraulic and environmental requirements.

**Scope** Replace the existing 72-inch CMP culvert with a new culvert designed for fish passage, replace guardrail, affected pavement and provide adequate shoulders for traffic. Improve or remove the existing fish ladder at the downstream end of the culvert.

**Justification** This project will increase the safety of vehicles and other road users in the Snoqualmie Valley, increase the condition of the road system, and enhance fish passage by replacing a failing culvert at NE Woodinville Duvall Road at 172nd Street with a new culvert designed to be fish passable. NE Woodinville Duvall Road is a major arterial carrying about 8,500 vehicles per day (as of 2018). It serves as a primary route between Snoqualmie River Valley communities and communities/urban areas accessible to Interstates 5 and 405. The culvert at NE 172nd is on a fish bearing stream (Tuck Creek), and is structurally deficient. The culvert and fish ladder directly downstream from this culvert have been determined to be barriers to fish passage. This project supports the Road Services Division’s drainage asset management need to replace culverts at end of their lifecycle and King County Executive Dow Constantine’s Clean Water and Healthy Habitat initiative. Culverts that are in poor condition or undersized pose a risk of failure that can result in collapse of the roadway, landslides, flooding, damage to public and private property, and associated risks to life safety. When culverts reach the end of their life cycle they need to be replaced with new infrastructure designed to current standards in order to mitigate risk and provide appropriate drainage functionality. Culverts that are not designed to be fish passable block access to important upstream habitat necessary for the sustainability of fish species. Roads’ proposed culvert replacement and fish passage projects are included in Executive Constantine’s broader county fish passage program (led by the Water and Land Resources Division), which complements the county’s collaboration with tribal governments and long-standing support for watershed-based salmon recovery efforts. The county initiated work with federal, state, and tribal officials to develop a fish passage program for watersheds. Originally conceived in late 2017, the program took on greater meaning following a June 2018 U.S. Supreme Court ruling that required the state of Washington to fix state-owned fish passage barriers within the Puget Sound area in order to avoid violating tribal treaty rights.

**Scope**

To replace Boise X Connection Bridge #3055A which is structurally deficient, functionally obsolete and weight restricted.

**Justification**

Constructed in 1956, this bridge carries SE Mud Mountain Road over Boise Creek, about two miles south of the City of Enumclaw. It is a vital link for an alternate route for State Route 410. SE Mud Mountain Road is a two lane local rural local access road and it carries about 795 vehicles per day.

Boise X Connection Bridge #3055A is a highly ranked candidate for replacement using the bridge priority analysis adopted by the King County Council in 1994 (Ordinance 11693). It has been categorized as structurally deficient with a sufficiency rating of 14.73 out of a possible score of 100 (a bridge in new condition). The bridge deck is narrow (21 feet from curb to curb) with no shoulders or sidewalks. The asphalt driving surface is supported by a corrugated metal decking system and the superstructure is steel girders. The substructure is creosote treated timber caps and piles, which can leach into the water and impact water quality, fish and wildlife. Deficiencies of the main structural members include corrosion of the corrugated metal decking, corrosion of the steel girders, extensive rot at one of the timber caps, and piles with extensive concrete encasement repairs. The bridge is considered scour critical and the creek has undercut approximately two feet below the concrete encasement repairs. In addition, most of the timber abutment is in poor condition. The backwall planks are rotten and were repaired with plywood to retain the roadway fill.

In 2019, the bridge was posted with weight restrictions. The weight restrictions were put into place after the Federal Highway Administration developed calculations for determining the weight that a bridge can safely carry. Federal, state and local governments – including King County – are required to evaluate publicly-owned vehicular bridges using these new criteria and formulas to determine whether additional weight restrictions must be placed on bridges under this new requirement.

**Scope**

To replace Fifteen Mile Creek Bridge #493C which is structurally deficient, functionally obsolete, and its timber substructure is at the end of its useful life.

**Justification**

This timber bridge carries SE May Valley Road, which is a major arterial, over Fifteen Mile Creek. The bridge is located about 0.2 mile west of Issaquah-Hobart Road SE, which is also a major arterial. The bridge was originally built in 1932, and it was rehabilitated in 1973 which included replacing the timber deck, stringers and caps.

Fifteen Mile Creek Bridge #493C is a highly ranked candidate for replacement using the bridge priority analysis adopted by the King County Council in 1994 (Ordinance 11693). It has been categorized as structurally deficient with a sufficiency rating of 7.00 out of a possible score of 100 (a bridge in new condition). The bridge is constructed of creosote treated timber substructure and superstructure, which can leach into the water and impact water quality, fish and wildlife. The timber stringers have supporting sister stringers to keep the bridge in service without posting it for load limits. The three-span timber trestle bridge has hydraulic and environmental deficiencies such as having creosote timber in contact with water and the middle piers located within the ordinary high-water which frequently traps debris. Fifteen Mile Creek takes a sharp bend downstream causing erosion and undermining of the stream bank. The bridge has substandard rails, narrow width, and a poor hydraulic opening.

**Scope**

To design and construct pedestrian and other non-motorized improvements on 16th Avenue SE between SW 107th Street and SW 100th Street in White Center.

**Justification**

This safety project will provide traffic calming at intersections, and pedestrian and bicycle safety enhancements along 16th Avenue SW, between SW 100th Street and SW 107th Street in White Center, a commercially zoned area of urban unincorporated King County. The White Center area is a vibrant and diverse community, making traffic and non-motorized safety of paramount importance. The collision history of the roadway includes pedestrian and vehicular fatalities.

The existing road configuration through this stretch of 16th Avenue SW varies from four to five vehicle travel lanes, parallel parking spaces, sidewalks, and extra-wide pedestrian street crossings without refuge. Americans with Disability Act (ADA) ramps in this project area do not meet contemporary standards and pedestrians often cross the road mid-block to access businesses.

**Scope**

To design and construct improvements to the intersection of SE Green Valley Road and 212 Avenue SE.

**Justification**

The intersection of SE Green Valley Road and 218th Avenue SE is a four-leg intersection, in southeast unincorporated King County. SE Green Valley Road is a rural minor collector road and 218th Avenue SE is a major arterial. These roads carry vehicles traveling to the cities of Auburn, Black Diamond, Covington, Enumclaw and Kent, including Black Diamond's new 5,000-home master planned development with retail and commercial business. As these cities grow in population, the intersection is experiencing traffic volume increases. The volumes on 218th Avenue SE have increased at a higher rate than those on SE Green Valley Road, and 218th is currently stop-controlled. Therefore, the stop-controlled leg of 218th Avenue SE is the higher volume leg and cars are more apt to disregard the stop signs.

The intersection was identified as a high collision location in the 2020 High Collision Location Report. From 2010 through 2019, the collision rate is 0.83 collisions per million entering vehicles and the intersection has a 5,000 ADT. The three-year collision rate from 2017 to 2019 is 1.48 collisions per million entering vehicles, indicating a significant rising collision trend and growing safety problems at the junction (a collision rate over .9 is considered a high collision location). Right angle collisions predominate, with about half occurring on the north approach. In addition, about half the collisions also cause injury.

The construction of an intersection improvement, which is likely a rural single lane roundabout, would eliminate angle collisions, sharply reduce the severity of the collisions, and provide more efficient travel through the intersection. A roundabout would likely reduce all collisions by 75 percent and serious collisions by 90 percent.

**Scope** To improve the intersection of Rainier Avenue S and S Lakeridge Drive, located between the cities of Renton and Seattle, by adding a signal and making other necessary improvements to accommodate a safer pedestrian crossing.

**Justification** The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This project will provide safer vehicular access to Rainier Avenue S from the Bryn Mawr and Skyway areas, as well as a safer crossing for pedestrians.

The intersection of Rainier Avenue S and S Lakeridge Drive is a three-legged intersection. Rainier Avenue S is a Tier 1 road that carries over 21,000 vehicles a day and serves as a primary arterial that connects the City of Renton and I-405 with the southern neighborhoods in the City of Seattle. S Lakeridge Drive is a Tier 3 road that carries approximately 2,300 vehicles a day and serves as a collector arterial for the Bryn Mawr-Skyway areas of unincorporated King County. The intersection meets the four-hour signal warrant and is on the King County signal priority array. There are limited signalized or controlled intersections along this stretch of Rainier Avenue S. This area also includes an Equity and Social Justice community.

**Scope**

This program will repair and modify road infrastructures such as sidewalks, curb ramps, crosswalks, and crosswalk signal push buttons to be in compliance with the Americans with Disabilities Act (ADA).

**Justification**

The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This program will improve the safety of the system by upgrading pedestrian facilities such as curb ramps, sidewalks, and crosswalk signal push buttons. These facilities are critical in facilitating people with mobility impairments to reach their destination and avoid conflict with vehicular traffic.

Roads is completing an ADA Transition Plan that will guide future upgrades to pedestrian infrastructure associated with the unincorporated King County road network. The Federal Highway Administration sets regulations to implement federal ADA. These regulations require that pedestrian facilities such as curb ramps and signal push buttons be upgraded to standard whenever a roadway is altered as part of a roadway reconstruction, rehabilitation or asphalt surface overlay project.

**Scope**

To implement rehabilitation for load-limited bridges to reduce or remove weight carrying restrictions.

**Justification**

Following a bridge collapse, and, more importantly, a recent decision by the Federal Highway Administration (FHWA) to allow heavier trucks on roads, the FHWA developed new calculations for determining the weight that a bridge can safely carry.

King County owns and maintains 178 vehicular bridges, and, as mandated, is evaluating each of them using current bridge condition information and the new federal standards to calculate bridge weight carrying capacity between now and the federal deadline of 2022. So far, Road Services has evaluated 112 bridges and determined new vehicle weight restrictions are necessary for 23 bridges. It is anticipated, however, that the number of weight restricted bridges will increase as the analysis of all county bridges is completed by 2022.

This program will perform load upgrades on select existing load restricted bridges or on any future bridge that requires it to be load restricted. Candidate bridges for these safety repairs will be chosen based on the feasibility of the repairs, their constructability, are economical to implement and have a benefit to impacted users.

**Scope** To evaluate options and replace Roads' legacy maintenance management system (MMS) to meet County Road Administration Board (CRAB) regulatory requirements. With the new system, Roads staff will be able to manage work accomplishment, actual expenditures, time and labor, units of measure through Oracle EBS integration. Currently these are manual processes.

**Justification** In the summer of 2011 Roads implemented Roadworks (Cityworks) and in January of 2012 Oracle EBS and PeopleSoft went live. Since that time as an unintended effect of the Oracle EBS and PeopleSoft implementation, the current Roads MMS application has lost the ability to consume essential regulatory information such as: work accomplishment, actual expenditures, time and labor, and units of measure through Oracle EBS integration. The current state results in decreased productivity and efficiency, requires manual processes and numerous workarounds. This presents a high risk for reporting accuracy and tracking for internal requirements and state mandated regulatory requirements. The MMS application is built on .NET and SQL technologies. Modernizing the platform is desired to keep up with current and future technologies in order to position MMS to integrate with current and future systems.

This project addresses an Essential Service and ensures Roads is in compliance with planning and maintenance activities for assets as required by county and state code.

**Scope**

Increase the safety and condition of SE 384th Street and enhance fish passage by replacing the undersized culvert with a new culvert of fish passable design.

**Justification**

This project will complement flood reduction funding approved by the King County Flood Control District to remove undersized culverts on Charlie Jones Creek in and around Muckleshoot Indian reservation lands. Roads and the District have partnered together on identifying projects to address locations where recurring flood events have impacted or have the potential to impact local communities, and Roads has a countywide program to implement these projects (1131333 RSD CWP FLOOD CONTROL DISTRICT).

The District's and Roads' 6-year CIP programs include funds to for Road Services to address two nearby culverts at SE 384th Street at 176th Avenue SE (FCD project WLFL9 CHARLIE JONES DS CULVERT), which is about one quarter mile east of this project, and at SE 380th Place and SR 164 (FCD project WLFL9 CHARLIE JONES US CULVERT), which is about one mile east. This undersized culvert on SE 384th Street restricts flow which causes flooding to regularly occur on numerous surrounding properties and the roadway.

This existing culvert also impacts fish migration. Replacing this culvert with a fish passable structure will remove one of the last known impediments along this stream and will also complement other investments for in-stream habitat improvements made near this project.

**Scope** Improve access to bus service in transit-dependent neighborhoods through Americans with Disabilities Act (ADA) improvements to pedestrian facilities. Improvements will address high priority pedestrian barriers identified through Roads' recently completed 2021 King County Roads American with Disabilities Act Transition Plan. This capital investment will bring existing (up to 60) ADA ramps up to contemporary standards, along Metro Transit RapidRide "H" Line corridor. These investments will facilitate the use of active transportation and transit for people with disabilities, people using strollers, people with limited mobility, people who are older, and the community-at-large.

**Justification** Improvements would be located in the White Center and, as funding allows, the Skyway communities. Community members in these areas tend to have lower incomes than the county average and lower English proficiency, and tend to be more racially diverse. Over 50 percent of the residents along the new RapidRide H Line corridor are people of color (versus 38 percent countywide), over 20 percent of households have limited English proficiency (versus 6 percent countywide), and over 30 percent of households are in poverty (versus 10 percent countywide). Households along the corridor are also less likely to own a car; 20-30 percent do not own a car, versus 10 percent countywide. Residents are more likely to be older than 65 (14-20 percent versus 13 percent countywide); these improvements will help residents remain in their community with the onset

**Status** Proposed for 2022

Electronic Record and Signature Disclosure
--

## **ELECTRONIC RECORD AND SIGNATURE DISCLOSURE**

From time to time, Carahsoft OBO King County ITD (we, us or Company) may be required by law to provide to you certain written notices or disclosures. Described below are the terms and conditions for providing to you such notices and disclosures electronically through the DocuSign, Inc. (DocuSign) electronic signing system. Please read the information below carefully and thoroughly, and if you can access this information electronically to your satisfaction and agree to these terms and conditions, please confirm your agreement by clicking the 'I agree' button at the bottom of this document.

### **Getting paper copies**

At any time, you may request from us a paper copy of any record provided or made available electronically to you by us. You will have the ability to download and print documents we send to you through the DocuSign system during and immediately after signing session and, if you elect to create a DocuSign signer account, you may access them for a limited period of time (usually 30 days) after such documents are first sent to you. After such time, if you wish for us to send you paper copies of any such documents from our office to you, you will be charged a \$0.00 per-page fee. You may request delivery of such paper copies from us by following the procedure described below.

### **Withdrawing your consent**

If you decide to receive notices and disclosures from us electronically, you may at any time change your mind and tell us that thereafter you want to receive required notices and disclosures only in paper format. How you must inform us of your decision to receive future notices and disclosure in paper format and withdraw your consent to receive notices and disclosures electronically is described below.

### **Consequences of changing your mind**

If you elect to receive required notices and disclosures only in paper format, it will slow the speed at which we can complete certain steps in transactions with you and delivering services to you because we will need first to send the required notices or disclosures to you in paper format, and then wait until we receive back from you your acknowledgment of your receipt of such paper notices or disclosures. To indicate to us that you are changing your mind, you must withdraw your consent using the DocuSign 'Withdraw Consent' form on the signing page of a DocuSign envelope instead of signing it. This will indicate to us that you have withdrawn your consent to receive required notices and disclosures electronically from us and you will no longer be able to use the DocuSign system to receive required notices and consents electronically from us or to sign electronically documents from us.

### **All notices and disclosures will be sent to you electronically**

Unless you tell us otherwise in accordance with the procedures described herein, we will provide electronically to you through the DocuSign system all required notices, disclosures, authorizations, acknowledgements, and other documents that are required to be provided or made available to you during the course of our relationship with you. To reduce the chance of you inadvertently not receiving any notice or disclosure, we prefer to provide all of the required notices and disclosures to you by the same method and to the same address that you have given us. Thus, you can receive all the disclosures and notices electronically or in paper format through the paper mail delivery system. If you do not agree with this process, please let us know as described below. Please also see the paragraph immediately above that describes the consequences of your electing not to receive delivery of the notices and disclosures electronically from us.

**How to contact Carahsoft OBO King County ITD:**

You may contact us to let us know of your changes as to how we may contact you electronically, to request paper copies of certain information from us, and to withdraw your prior consent to receive notices and disclosures electronically as follows:

To contact us by email send messages to: bob.johnson@kingcounty.gov

**To advise Carahsoft OBO King County ITD of your new e-mail address**

To let us know of a change in your e-mail address where we should send notices and disclosures electronically to you, you must send an email message to us at bob.johnson@kingcounty.gov and in the body of such request you must state: your previous e-mail address, your new e-mail address. We do not require any other information from you to change your email address..

In addition, you must notify DocuSign, Inc. to arrange for your new email address to be reflected in your DocuSign account by following the process for changing e-mail in the DocuSign system.

**To request paper copies from Carahsoft OBO King County ITD**

To request delivery from us of paper copies of the notices and disclosures previously provided by us to you electronically, you must send us an e-mail to bob.johnson@kingcounty.gov and in the body of such request you must state your e-mail address, full name, US Postal address, and telephone number. We will bill you for any fees at that time, if any.

**To withdraw your consent with Carahsoft OBO King County ITD**

To inform us that you no longer want to receive future notices and disclosures in electronic format you may:

- i. decline to sign a document from within your DocuSign session, and on the subsequent page, select the check-box indicating you wish to withdraw your consent, or you may;
- ii. send us an e-mail to bob.johnson@kingcounty.gov and in the body of such request you must state your e-mail, full name, US Postal Address, and telephone number. We do not need any other information from you to withdraw consent.. The consequences of your withdrawing consent for online documents will be that transactions may take a longer time to process..

**Required hardware and software**

Operating Systems:	Windows® 2000, Windows® XP, Windows Vista®; Mac OS® X
Browsers:	Final release versions of Internet Explorer® 6.0 or above (Windows only); Mozilla Firefox 2.0 or above (Windows and Mac); Safari™ 3.0 or above (Mac only)
PDF Reader:	Acrobat® or similar software may be required to view and print PDF files
Screen Resolution:	800 x 600 minimum

Enabled Security Settings:	Allow per session cookies
----------------------------	---------------------------

\*\* These minimum requirements are subject to change. If these requirements change, you will be asked to re-accept the disclosure. Pre-release (e.g. beta) versions of operating systems and browsers are not supported.

**Acknowledging your access and consent to receive materials electronically**

To confirm to us that you can access this information electronically, which will be similar to other electronic notices and disclosures that we will provide to you, please verify that you were able to read this electronic disclosure and that you also were able to print on paper or electronically save this page for your future reference and access or that you were able to e-mail this disclosure and consent to an address where you will be able to print on paper or save it for your future reference and access. Further, if you consent to receiving notices and disclosures exclusively in electronic format on the terms and conditions described above, please let us know by clicking the 'I agree' button below.

By checking the 'I agree' box, I confirm that:

- I can access and read this Electronic CONSENT TO ELECTRONIC RECEIPT OF ELECTRONIC RECORD AND SIGNATURE DISCLOSURES document; and
- I can print on paper the disclosure or save or send the disclosure to a place where I can print it, for future reference and access; and
- Until or unless I notify Carahsoft OBO King County ITD as described above, I consent to receive from exclusively through electronic means all notices, disclosures, authorizations, acknowledgements, and other documents that are required to be provided or made available to me by Carahsoft OBO King County ITD during the course of my relationship with you.
